

third\_party/entt/resource  
/handle.hpp

third\_party/entt/resource  
/cache.hpp

third\_party/entt/entt.hpp

```
graph TD; A[third_party/entt/resource/handle.hpp] <--> B[third_party/entt/resource/cache.hpp]; B <--> C[third_party/entt/entt.hpp]; C <--> A;
```

The diagram illustrates the dependencies between three header files in the entt library. The file `third_party/entt/resource/handle.hpp` (top) depends on `third_party/entt/resource/cache.hpp` (middle) and `third_party/entt/entt.hpp` (bottom). The file `third_party/entt/resource/cache.hpp` depends on `third_party/entt/entt.hpp`. The file `third_party/entt/entt.hpp` depends on `third_party/entt/resource/handle.hpp`. The dependencies are shown as blue arrows forming a cycle.
