

```
entt::process< process  
_adaptor< Func, Delta  
>, Delta >
```

```
entt::Func
```

```
entt::process_adaptor  
< Func, Delta >
```

The diagram illustrates the relationship between three C++ template types. At the bottom is a grey box containing the text `entt::process_adaptor < Func, Delta >`. Two arrows originate from this box: a blue arrow pointing diagonally up and to the left to a white box containing `entt::process< process_adaptor< Func, Delta >, Delta >`, and a red arrow pointing diagonally up and to the right to another white box containing `entt::Func`. This indicates that `entt::process_adaptor` inherits from both `entt::process` and `entt::Func`.
